New York City Metropolitan Area

Education

Rutgers University–New Brunswick — New Brunswick, NJ
B.S. Data Science (Economics Track) / Computer Science | Cumulative GPA: 3.50 — *Expected May 2028*

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, Java, SQL, C#, HTML/CSS, R
- **Frameworks & Libraries:** React, Next.js, Tailwind CSS, FastAPI, Flask, PyTorch, OpenCV, pandas, NumPy, Zustand
- **Cloud & DevOps:** AWS (Lambda, DynamoDB, S3), PostgreSQL, Vercel, Git/GitHub, GitHub Actions (CI/CD), Linux
- **AI & Productivity Tools:** Claude Code, ChatGPT, LLM APIs (Groq, Gemini), Base44, Figma, Excel
- **Concepts:** Full-Stack Development, Backend Systems, REST API Design, Computer Vision, LLM Integration, Data Structures & Algorithms, Software Testing & QA, Secure Coding

Experience

Software Engineer — May 2026 – Present
KBR Commercial Real Estate (kbrre.com) — *Metuchen, NJ*
- Owned end-to-end development of the firm's production web platform (kbrre.com), from requirements with firm leadership to launch, serving 24+ commercial and residential assets across 3 states with a 98+ Google Lighthouse score.
- Diagnosed ∼150s Google Sheets sync timeouts in production and engineered dual-portfolio data pipelines using TypeScript/Next.js server actions and { `cache: 'no-store'` } controls, reaching real-time (<200ms) updates.
- Optimized mobile UX for 100% responsiveness across 10+ viewport breakpoints, implementing 100dvh snapping app-rails, fluid image fallbacks, and high-contrast accessibility standards.

Low-Voltage Electronics and Telemetry — Sep. 2025 – May 2026
Formula Buckeyes (Ohio State Formula SAE) — *Columbus, OH*
- Collected and validated real-time sensor data from vehicle electronics, building and testing data pipelines for embedded control modules that caught inconsistencies before data reached stakeholders.
- Collaborated with a multi-disciplinary engineering team to document and communicate data flows across subsystems.

Network Administration and Systems Intern — Jan. 2025 – Feb. 2025
Laksan Technologies — *Metuchen, NJ*
- Supported network infrastructure for 50+ users, helping implement access controls and documentation practices.
- Helped refactor frontend code, contributing to a 10% improvement in page load performance.

Projects

Where RU?: Campus Lost & Found (HackRU Fall 2026) — Fall 2026
whereru-amber.vercel.app | React, TypeScript, Flask, PyTorch, OpenCV, DINOv2, Vercel
- Built image-based classroom recognition that identifies which of 29 Rutgers lecture halls a photo was taken in, combining OpenCV feature matching with PyTorch DINOv2 scene similarity calibrated on real photos.
- Designed private matching that alerts only the likely owner, who must prove ownership before any identities are shared.
- Built real-time sync with record-level merging, load-tested at 50 concurrent clients (p95 <30ms, zero lost writes).

Volare 2.0: Text-to-SQL Aviation Analytics Platform — Fall 2026
volarevision.live | FastAPI, PostgreSQL, Next.js (TypeScript), Groq, Google Gemini, Leaflet
- Engineered an async Text-to-SQL engine generating read-only PostgreSQL queries over multi-million-row BTS T-100 aviation data, behind a 4-layer security pipeline (AST blacklisting, read-only roles, timeouts, prompt-injection filters).
- Built LLM orchestration with prompt engineering, automated SQL self-correction loops, and tiered fallback across Groq and Gemini, achieving sub-second latency and a 100% pass rate on validation benchmarks.
- Built an interactive Next.js/Tailwind dashboard mapping great-circle flight paths and route aggregations via Leaflet.

taskFolio: University Task Command Center — Fall 2026
taskfol.io | Next.js, React, TypeScript, Tailwind, Zustand, Neon Postgres, Vercel
- Built and deployed an offline-first PWA to track courses, assignments, and exams, with Canvas/Google Classroom import.
- Engineered zero-login cross-device sync via per-device keys, debounced Neon Postgres pushes, and QR-code pairing.
- Hardened API routes against SSRF with private-IP blocking and response caps, plus Postgres-backed rate limiting.
- Built a weight × urgency priority queue and GPA forecaster, backed by 57 unit tests and pre-deploy checks.

Activities & Affiliations

Honda Talent Cohort Program (Beta Group) – Honda x OSU — Jan. 2026 – May 2026
Cohort Member: Selected for an automotive industry talent program focused on mobility systems.

Kappa Theta Pi (Professional Technology Fraternity) – Rutgers University — Feb. 2026 – Present
Active Member; previously Co-Director of Internal Affairs (Ohio State): Coordinated internal affairs for 50+ members.
